PREPARED FOR EXAMPLE CLIENT

Automation Health Check

Period: 15 Sept 2026 – 14 Oct 2026 · 2,953 runs across 8 workflows

Report date
15 Oct 2026

Risk score (0–100)	Success rate	Failed / silent	Est. money wasted	Est. hours lost
13 LOW	96.8%	94 / 72	€830	42 h
	95.1% excl. silent failures			

TOP PROBLEMS

1. Invoice Sync ran 720 times, 36 returned nothing but said "success".
2. Lead Enrichment failed 28 of 521 runs (5.4%). Most common error: "Enrichment API timeout after 30s" (28×).
3. Support Ticket Triage failed 26 of 180 runs (14.4%). Most common error: "LLM response could not be parsed as JSON" (26×).

WHAT WE RECOMMEND

- Add an output check to Invoice Sync: when it returns zero items, stop the run and alert someone instead of reporting success.
- Fix the most common error in Lead Enrichment ("Enrichment API timeout after 30s", 28×). This looks like a timeout: raise the timeout or add retries with back-off.
- Fix the most common error in Support Ticket Triage ("LLM response could not be parsed as JSON", 26×). Send failures to an alert channel so they are seen the same day.
- 1 workflow has fewer than 10 successful runs, so it was not checked for silent failures. Re-run this check when more history is available.

WORKFLOWS

WORKFLOW	RISK	RUNS	SUCCESS	FAILED	SILENT	P95 DURATION
Support Ticket Triage	29 Elevated	180	85.6%	26	0	10.1 s
Inventory Update	20 Elevated	240	100%	0	16	58.5 s
Invoice Sync	19 Low	720	97.9%	15	36	5 s
CRM Contact Sync	11 Low	460	97.8%	10	20	7.6 s
Lead Enrichment	11 Low	521	94.6%	28	0	3.2 s
Order Confirmation Emails	4 Low	797	98.1%	15	0	1.5 s
Daily Team Digest	0 Low	30	100%	0	0	3.8 s
Weekly KPI Report	0 Low	5	100%	0	n/a	24 s

HOW THESE NUMBERS ARE CALCULATED

Silent failures are runs marked “success” that returned no data when the workflow normally does, took over 3× or under 0.1× the usual time, or scheduled runs that never happened (estimated from gaps over 3× the usual interval). Money and hours are estimates: (failed + silent) × €5 and × 15 minutes. Risk score = min(50, 200 × failure rate) + min(35, 300 × silent rate) + min(15, 150 × missed share). Times are UTC.
